Recommendation letter for Yohannes Asave Sisay

Dear Sir/Madam,

I have known Mr. Yohannes since 2019 until now. He was among my students in the undergraduate (from 2019-2022), and post graduate (from 2022-2023) programs of the Department of Geology, College of Applied Sciences, Addis Ababa Science and Technology University. I have taught him a number of undergraduate and advanced post-graduate courses in the department and found that he was among the top performing students in the class. During his B.Sc. study, he has shown outstanding performance and was exceptionally allowed by the university to register for an M.Sc program to pursue parallel study. Finally, he has completed his B.Sc. Program with a result of very great distinction, ranking at the top of the class. Likewise, he has obtained excellent grades in his M.Sc. Courses and is among a few top achievers. He was simply an outstanding and impressive student. Yohannes is a self-motivated, highly disciplined and hardworking student. He takes lead in group project work and assignments, motivates others and shows high degree of commitment to achieve the desired result under any circumstances.

To the best of my evaluation, he is fit to take up any challenges. Yohannes is a decent and nice person to work with, has excellent character, is humble communicator, listens more and speaks less but always opts for impacting conversations and academic discussions. As I have described above, he is enthusiastic to apply what he has learned and also keen to learn more. He is truly a hardworking, duty oriented young man with the ability to easily adapt himself to any new social and environmental setups. Above all, he is a good learner and has highest degree of commitment to achieve success.

Therefore, I believe that Yohannes is the best candidate to consider for admission in your esteemed university. Given the chance, he has the courage, enthusiasm, commitment and attitude to achieve the desired results. Hence I strongly recommend him for your kind consideration. I wish him the best of luck.

Sincerely,

Tarekegn Tadesse (Ph.D.)
Associate Professor in Geology,
College of Natural and Applied sciences, Department of Geology,
